

AetherCura AI Consultation Report

Patient/User: Aayush

Session Title: what is acne?

Generated On: 2026-05-27 10:51:51 UTC

Consultation Mode: General Health

Severity Level: Low

AI Guidance

Acne is a common skin disorder that results from blockage and inflammation of the hairfollicle (pilosebaceous) units, producing comedones, papules, pustules, and sometimes nodules or cysts. It most often appears on the face, chest, shoulders, and upper back where sebaceous glands are abundant. Hormonal changes, excess oil production, bacteria, and inflammation contribute to its development.

Precautions

Follow medical precautions and consult a doctor if symptoms persist.

Doctor Advice

Consult a licensed doctor for proper diagnosis and treatment.
